

Hygienilac does not employ silver technology and is completely UV stable.
Hygienilac's anti-bacterial properties do not migrate on contact with water.

How does Hygienilac work?

Staph Aureus

It prevents the bacteria's access to nutrients so they starve and die

It has a kill rate of 99.9 per cent over a 24 hr period

It will remain effective for years because of its inherently low water solubility

Because of Hygienilac's inherent biocidal properties the furniture can be effectively cleaned with Hygienilac cleaner.

What tests have been done?

E Coli

Hygienilac has passed British Standard 6250 tests for severe usage.

The active ingredient has approvals from the following organisations:

Food and Drug Administration (FDA)

Health and Safety Executive (HSE) approval for indirect or incidental food contact

Environmental Protection Agency (EPA)

It is non carcinogenic, non mutagenic and non skin sensitising

What bacteria does it work against?

Hygienilac has been tested against the following bacteria:

Staphylococcus aureus Methicillin-Resistant Strain (MRSA);

Listeria monocytogenes;

Clostridium difficile;

staphylococcus aureus;

salmonella enteritidis;

klebsiella pneumoniae;

aspergillus niger;

pseudomonas aeruginosa;

penicillium purpurogenum;

bacillus cereus;

saccharmyces cerevisiae;

Escherichia coli

*Certificate of Analysis dated 4.6.04. The following bacteria were tested against a glass control and showed a 99.9% reduction after 24 hours.

*Certificate of Analysis dated 23.7.04 used against a glass tile control and showed a 99.9% reduction after 24 hours.

*Certificate of Analysis dated 1.7.05 Clostridium difficile showed a 99.9% reduction after 24 hours.

*Certificate of Analysis dated 11.5.07 C difficile spore cells showed a greater than Log 3 reduction obtained after 60 minutes contact time

Hygienilac has received a point 3 award from the NHS Infection Control Rapid Review Panel (Surface Coating Category).
